

OMNI-KAP™ medical waste disposal powder is a safe and effective method used to neutralize and solidify solid or liquid hazardous medical waste. The OMNI-KAP Solidification Kit includes everything you need to manage your medical waste based on patented OMNI solidification technology combined with over ten years of practical field applications and experience.

To reduce the risk of removing and transporting collected medical waste, OMNI-KAP was specifically engineered to eliminate the risk of hazardous aerosolization and splashing of waste fluids while neutralizing solid waste. In fact, OMNI-KAP exceeds the newest DOT medical waste disposal regulation under HM-226, *Hazardous Materials*.

When used properly, OMNI-KAP creates a dry inert solid, making for safer handling of medical waste. That's smart business.

BENEFITS

- Cementationously neutralizes and solidifies hazardous medical waste
- No special tools or equipment necessary
- Designed for ease of use
- Resulting waste material is safe for transport and disposal
- Exceeds the newest DOT medical waste disposal regulations

FEATURES

- Patented OMNI solidification technology
- A medical waste kit that includes 4 one-gallon containers of OMNI-KAP powder.
- Available in bulk form for larger scale medical waste solidification

APPLICATIONS

OMNI-KAP is a dry powder that cementationously solidifies and neutralizes medical wastes such as syringes, vials, and needles in addition to waste fluids. No special tools or equipment is required. Simply mix the powder with water in the containers provided and add your medical waste. Cleanup is fast and the encapsulated waste material is safe for disposal. All free water is chemically bound, not gelled as is the case with many competitive products. The final reaction product is a dry inert solid.

NOTE: For maximum effectiveness in cases of dried residue, OMNI-KAP powder will require added water to react cementationous powders.
